Note. T, T stage; N, N stage.

Supplementary Figure S1. OS of HER2 low and HER2-IHC0 in different ER levels. (A) ER: 0%; B. ER: 1%–10%; (C) ER: 10%–50%; (D) ER > 50%. HER2 low group showed a longer OS in ER 0 and ER 10%–50% groups [ER: 0% group: $HR = 0.319$ (95% CI: 0.132–0.776), $P = 0.0117$; ER: 10%–50% group: $HR = 0.2183$ (95% CI: 0.06159–0.7737), $P = 0.0291$]. P -values were calculated using the stratified log-rank test.

Supplementary Figure S2. DFS for HER2 low and HER2-IHC0 in different ER levels. (A) ER: 0%; (B) ER: 1%–10%; (C) ER: 10%–50%; (D) ER > 50%. HER2 low group showed a longer OS than the ER 0 and ER 10%–50% groups. No significant differences were found between the HER2-IHC0 and HER2 low groups. *P*-values were calculated using the stratified log-rank test.
