

Supplementary Table S1. Estimation of the age and BMI subgroups for NAFLD incidence using adjusted Poisson regression models

Item	<i>RR</i>	<i>95% CI</i>	<i>P</i> value
Age	1.010	1.004–1.016	< 0.01
BMI subgroup (Obese/overweight and normal weight groups)	1.480	1.340–1.630	< 0.001

Note. BMI, body mass index; *RR*, relative risk; *CI*, confidence interval.
