**Supplementary Figure S1.** Flow diagram of the study population.**Supplementary Figure S2.** Overall effect of the urinary PAHs mixture on risks of allergic outcomes (A) and univariate exposure-response function between PAH metabolites and allergic outcomes (B) in the overall study population, estimated using BKMR models. Models were adjusted for age, race/ethnicity, sex, BMI, PIR, and serum cotinine level. The concentrations of urinary PAHs were log-transformed in the models.

Supplementary Table S1. Demographic characteristics of the study population by allergic outcome status in NHANES 2005–2006 ($n = 1,672$)
