

Supplementary Figure S1. Effects of curcumin on the expression levels of neuroinflammatory factor proteins induced by gas explosion in the rats' brains of various experimental groups (means \pm SD, $n = 3$). Con, control group; BBI, model group; Cur, curcumin intervention group. * $P < 0.05$, compared to the Con group; ** $P < 0.05$, compared to the BBI group. Standard deviations are denoted by error bars on graphs. SD, standard deviation.
