

**Supplementary Figure S1.** Rarefaction curves for 16S rRNA gene sequences of (A) all samples and (B) both vectors. Each line represents an independent sample.

**Supplementary Figure S2.** Assessment of microbial diversity in midge and tick groups. (A) Principal coordinate analysis (PCoA) of midge and tick bacterial communities. Each dot represents a collective sample. All samples found inside the circle constitute biological replicates at a confidence level of 99.95%. The samples presented two distinct clusters, as indicated by Adonis test ( $R^2 = 0.24$ ,  $P = 0.001$ ). (B) Boxplots representing the OPU (Operational phylogenetic Unit) evenness by vector type. (C) Volcano plot for identifying differentially expressed OPUs using a negative binomial generalized linear model. Midges and ticks were differentially enriched for 78 and 44 OPUs, respectively, at a threshold of  $\alpha < 0.05$ .

**Supplementary Figure S3.** Comparisons of bacterial microbiota among ticks. (A) Non-metric multidimensional scaling ordination—NMDS—of the bacterial communities of free-living ticks and ticks parasitizing on animals. The samples presented two distinct clusters, as indicated by Adonis test ( $R^2 = 0.16$ ,  $P = 0.032$ ). (B) Volcano plot for identifying differentially expressed OPUs between free-living ticks and ticks parasitizing on animals using a negative binomial generalized linear model. Free-living ticks and ticks parasitizing on animals were differentially enriched for 33 and 4 OPUs, respectively, at a threshold of  $\alpha < 0.05$ .

**Supplementary Figure S4.** Non-metric multidimensional scaling ordination—NMDS—of the bacterial communities of all OPUs with respect to (A) geography and (B) hosts of midges. There was no significant difference in the bacterial community structure between geography (Adonis,  $R^2 = 0.09$ ,  $P = 0.17$ ) and hosts of midges (Adonis,  $R^2 = 0.04$ ,  $P = 0.86$ ). Shepard stress diagrams for all OPUs with respect to (C) geography and (D) hosts of midges.

## ***Supplementary Material***

### **Supplementary Tables**

**Table S1. Collected information of midge and tick samples in Jiangxi Province, China.**

| Species | Sample No. | No. of pools | Type of samples            | Sources             | Location<br>(above m. s. l, latitude/longitude, County)    |
|---------|------------|--------------|----------------------------|---------------------|--|
| Midges  | M01        | 50           |                            |                     |  |

Sample No.: the number of samples.

No. of pools: the number of individuals in each sample.

Free-living ticks: ticks collected from the natural environment.

Ticks parasitizing on animals: ticks collected from animal hosts.

\*All midge samples were species of *Culicoides arakawai*, except for sample M07, which was *Culicoides nipponensis*, and sample M18, which was *Culicoides punctatus*.

**Table S2. List of primers used in this study.**

| Target Gene           | Primer Name | Sequence (5'-3')           | PCR Type | Fragment Size (bp) |
